Git and GitHub: two essential collaboration tools.
- 114 **My Linux desktop**
Live from the desktop of the Awesome WM developer.

TUTORIALS

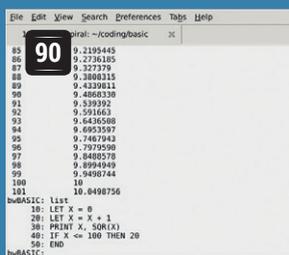

Benchmarking: how fast is your computer?

Test the capabilities of your machine and persuade the boss to let you get a new one.

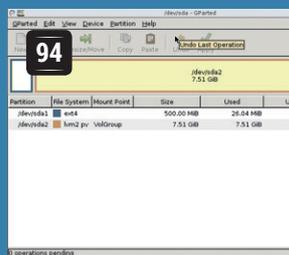

Office migration: printing and email

Let your small or home office labour no longer under the oppressive yoke of XP. Freedom!

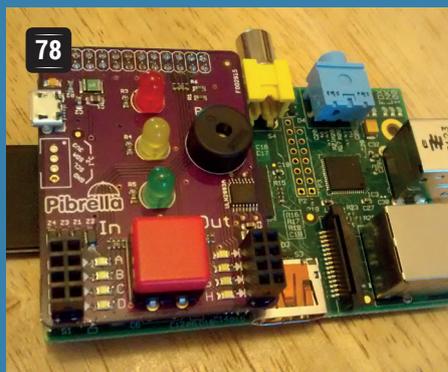

BASIC and the dawn of the microcomputer

The language that started a revolution.

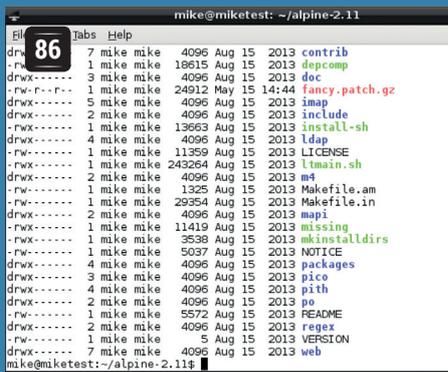

PyParted: partition your disk with Python

Gain insane levels of geek points.

Raspberry Pi: make games with Scratch

Build a set of traffic lights and a random number dice-rolling game – both with flashy lights!

Compile software from source code

Get the latest software, extra features and more speed with home-rolled source code.

100 Switch to Python 3

Migrate your old code to the new way.

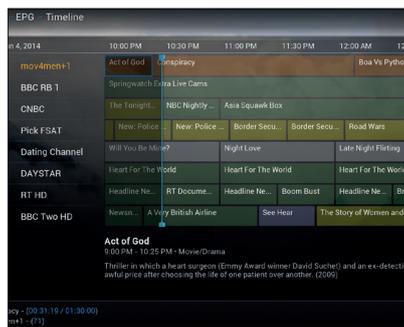

104 PageRank: write your own search algorithm.

Write your own search algorithm.

106 Develop for Android

Prettify our Linux Voice app.

REVIEWS

46 XBMC vs MythTV

Two giants Linux media centre applications fight for the right to control your television.

48 Linux Mint 17

The smoothest, slickest desktop Linux distribution gets a comforting new release.

49 Micro Python & Pyboard

Hacking projects await for this microcontroller board and its cut-down version of Python.

50 Apache OpenOffice

We tend to forget about OpenOffice, since the fork with LibreOffice, but it's still out there and still getting better...

51 Oxygen XML Editor 16

Give your content definition, structure and prettiness with this fantastic (and expensive, and proprietary) XML editor.

52 Books

Where else would you get Snowden, JavaScript and real British Ale?
